

EXECUTIVE PROFESSIONAL PORTFOLIO

Version 1.1.6 : August 2026

Executive leader with over 30 years of international OEM/ODM leadership across product development, manufacturing, global supply chain, commercial operations, project execution, and P&L management. Proven track record delivering innovative products from concept through commercialization across Asia-Pacific, Europe, and North America, serving multinational corporations, publicly listed companies, SMEs, and technology startups across multiple industries, including consumer electronics, connected devices, Edge AI, and IoT. Recognized for business transformation, operational excellence, strategic sourcing, product commercialization, and leading cross-functional organizations to deliver scalable, manufacturing-ready products.

Throughout my career, I was entrusted with progressively broader executive leadership responsibilities, typically within six months, in recognition of my leadership, execution excellence, and business performance. My responsibilities expanded across corporate strategy, global operations, product commercialization, project execution, manufacturing, global supply chain, and P&L management, reflecting sustained executive growth and progressively broader organizational leadership throughout my career.

From the beginning of my engineering career, I was selected to join one of my company's first 300,000+ unit Sony & Sansui OEM product development programs under the technical leadership of a contract-based Japanese Chief Engineer with extensive engineering experience at Panasonic Japan. This early opportunity immersed me in Japanese engineering discipline, multinational collaboration, structured product development, and rigorous execution standards while serving as a key technical interface between company management, Japanese engineering leadership, Sony & Sansui Business Units across multiple countries and regions, chipset and technology partners, and cross-functional Engineering, Procurement, Manufacturing, and Quality teams.

Beyond my direct executive responsibilities, I was also entrusted by senior executives and publicly listed companies to lead strategic projects, business transformation, and cross-functional execution across multiple industries in Singapore, Indonesia, and Malaysia, reflecting confidence in my leadership, execution capability, and ability to deliver measurable business results across diverse business environments. Most recently, I led the strategy, system architecture, commercialization, and government innovation funding initiatives for an Edge AI-enabled IoT platform, including NRC IRAP, SR&ED, and BDC innovation and commercialization programs.

Execution speed, data-driven decision-making, and measurable business results are at the core of my leadership philosophy. I transform strategy into execution, build high-performing teams, and accelerate product commercialization, manufacturing readiness, and sustainable business growth.

Executive Portfolio Website: <https://francistai.github.io>

Executive Career Highlights

- **Repeatedly selected for four promotions and expanded executive leadership assignments**—typically within approximately six months—to lead business growth, business transformation, business model transformation, process optimization, organizational turnarounds, change management, and strategic initiatives.
- **Delivered 27.3% revenue growth (~US\$81M/HK\$631M)** while improving gross margin from **6.67% to 8.14%** within two years, achieving the company's highest revenue growth and gross margin performance in five years through market expansion, commercial strategy, and cross-company leadership.
- Served as a **key business integrator, cross-functional executive leader, and problem solver** across multiple industries, business operations, and OEM/ODM product platforms, driving stakeholder engagement, project execution, resource allocation, and team performance against KPIs while aligning Business, Engineering, Hardware, Firmware, Procurement, Manufacturing, Quality, Supply Chain, external technology partners, and client teams to resolve complex business, technical, and operational challenges and accelerate execution from strategy and product development through NPI, production ramp-up, and commercialization.
- Reduced manufacturing and supply chain lead times from **60+ days** to approximately **30 days**.
- Improved manufacturing throughput by **10%+** while consistently achieving approximately **95% on-time delivery**.
- **Reduced ERP inventory by US\$7.2M (25.9%)** within two years, achieving the company's lowest inventory level in five years while improving operational efficiency and working capital.
- **Reduced R&D costs by 85% (US\$3.0M to US\$0.45M)** within two years, achieving the company's lowest R&D spend in five years through ODM-to-OEM business transformation, platform standardization, design optimization, and supplier collaboration.
- Contributed to approximately **25% annual company growth**, supporting expansion from approximately **500 to over 1,200 employees** within three years.

- Commercialized one of Europe's **smallest and best-value Philips RF Silicon Tuner-based DVB-T ODM receiver platforms** within six months, delivering OEM/ODM programs for **Bang & Olufsen, METRONIC, Carrefour, Tesco, and ASDA/Walmart** through leading international retailers.
- Recovered the cancelled **Samsung ODM program** by transitioning it to **Creative**, restoring production readiness within **three months** and delivering over **100,000 cumulative units** within one year.
- Delivered **three Sony & Sansui OEM A/V system design projects** within approximately **nine months**, successfully completing engineering verification, technology transfer, and commercial launch across **Sony & Sansui's global Business Units**, with the flagship technology transfer program completed approximately **three months ahead of schedule**.
- Recovered a one-year-delayed **Timely OEM/ODM program** to first shipment within **three months**, helping resolve **several million Hong Kong dollars of excess inventory** and accelerating Timely's first notebook OEM program by **two months**.
- **Led international OEM/ODM product development, manufacturing, global supply chain, commercial operations, project execution, and P&L management** across Asia-Pacific, Europe, and North America.
- **Led business transformation for Edge AI, AIoT, and connected device platforms**, delivering product strategy, system architecture, commercialization, and innovation funding initiatives supporting **NRC IRAP, BDC, and SR&ED** within **six months** of assuming the role.
- **Early-career R&D Engineer selected to serve as the key technical interface** between company management, the contracted Japanese Chief Engineer, Sony's Japanese engineering team, Sony & Sansui Business Units across multiple countries and regions, chipset and technology partners, and cross-functional Engineering, Procurement, Manufacturing, and Quality teams, gaining early exposure to multinational product development, technology transfer, and rigorous engineering execution standards.

1. Connected Devices, Edge AI & Industry 4.0 Platform (Oct 2025–Jun 2026)

Highlights

- Led product strategy, system architecture, and commercialization planning for a scalable Edge AI platform integrating intelligent sensing, embedded AI, connected devices, and real-time analytics.
- Defined product requirements, chipset strategy, supplier strategy, and product commercialization planning while directing cross-functional execution across hardware, firmware, AI/ML, suppliers, and business stakeholders.
- Developed a scalable Edge AI, gateway, and cloud analytics platform establishing a technology foundation for computer vision, intelligent monitoring, and next-generation connected device ecosystems, supporting government-funded innovation initiatives (**IRAP and SR&ED**).

Outcome

- Established a scalable AIoT technology platform enabling future commercialization across Industry 4.0, Home Automation, Smart City, and connected device ecosystems.
- Reduced technical and deployment risk through prototype validation, cross-functional execution, and strategic commercialization planning.

2. Consumer Electronics, OEM/ODM & Manufacturing Leadership (2004–2019)

Highlights

- Built and led R&D, Product Management, OEM/ODM Engineering, Manufacturing, Procurement, and Global Supply Chain operations across China and Taiwan.
- Managed hardware product portfolios from strategy and chipset selection through NPI, commercialization, and mass production.
- Delivered high-volume ODM/OEM programs for Carrefour, Tesco, ASDA/Walmart, Bang & Olufsen, and METRONIC, coordinating manufacturing partners including **DXG** (Taiwan-listed), **TCL**, and **Seastar** (China-listed).
- Optimized manufacturing cost, inventory, and operational efficiency through supplier and customer rebate programs, Lean initiatives, and end-to-end supply chain optimization.
- Defined chipset platform strategy by selecting Philips Semiconductors while evaluating STMicroelectronics alternatives to optimize cost, scalability, supply continuity, and OEM differentiation.
- Developed a phased semiconductor procurement strategy supporting a **100K-unit** ODM commitment, mitigating supply risk through purchase commitments exceeding **US\$600K** while coordinating firmware integration with **iWedia and Hyperpanel**.

Outcome

- Improved manufacturing throughput by **10%+**.
- Achieved approximately **95% on-time delivery**.
- Reduced manufacturing and supply chain lead times from **60+ days** to approximately **30 days** through phased semiconductor deliveries aligned with production demand.
- Commercialized one of **Europe's smallest and best-value DVB-T receiver platforms**.
- Estimated end-to-end ODM development and commercialization cycle of approximately **six months**, from Philips RF Silicon Tuner technology introduction to production readiness and first customer shipments.
- Recovered a one-year-delayed OEM/ODM program to first shipment within three months, helping resolve several million Hong Kong dollars of excess inventory and accelerating a notebook OEM program by two months.

Recommended References

Albert Mak (*Managing Director, Timely Products Co. Limited, One of Dale's Strategic EMS Manufacturing Partners*)
(*Former Managing Director of a 50:50 joint venture with HKEX-listed TK Group*)

- Executive leadership in strategic ODM/OEM manufacturing partnership, commercial negotiations, and cross-company business operations spanning Manufacturing, Engineering, Supply Chain, Production, Finance, Accounting, Shipping, and executive decision-making.
- Led the successful recovery of Timely Products' one-year-delayed OEM/ODM program to first shipment within three months, helping resolve several million Hong Kong dollars of excess inventory by aligning Dale's Engineering, Marketing, Supply Chain, and Production teams with Timely Products, AKAI, suppliers, and manufacturing teams, while accelerating Timely's first notebook program by two months.
- Recognized as an exceptional business leader, a valued business partner, and a trusted friend.

Zhengjie Dong (*Former Managing Director, iWedia Chin, Philips Firmware Partner for Dale-Philips ODM Project*)

- Recognized for leadership in DVB-T ODM/OEM product development, firmware integration, engineering validation, production readiness, and cross-company collaboration with chipset vendors, software partners, and customers.

Nicolas Lamblain (*R&D Manager, METRONIC S.A.S., Dale major client*)

- Recognized for OEM/ODM product development, NPI, engineering evaluation, chipset selection, cost optimization, technical problem-solving, and cross-functional support through production readiness.

3. OEM/ODM Product Transformation (2001–2004)

Highlights

- Led the **ODM-to-OEM business transformation** and product portfolio expansion for Lenovo, Creative, Samsung, and other global brands by directing product strategy, supplier management, manufacturing readiness, and cross-functional execution across Engineering, Manufacturing, Supply Chain, and Quality.
- Defined chipset, pricing, supplier, cost reduction, and inventory optimization strategies supporting the business turnaround.

Major Commercial Programs: Creative MP3 Discman Player | Lenovo OEM MP3 Player

- Following the Samsung ODM program cancellation, assumed **BU Team Lead** responsibilities and led a successful **3-month Samsung ODM program** recovery by driving tooling redesign and fixes, product redesign, platform integration, engineering trade-offs, chipset strategy, supplier coordination, reliability engineering, QA validation, NPI, production readiness, and manufacturing ramp-up to commercial launch.
- Restructured the Korea R&D organization through product standardization, resource optimization, engineering cost reduction, and establishment of the China R&D Center.
- Improved manufacturing throughput, product quality, reliability, and team productivity, supporting successful product commercialization and business turnaround.
- Directed chipset and product platform strategy by evaluating **Texas Instruments, Cirrus Logic, Sigmatal**, and alternative DSP solutions to optimize product positioning, manufacturability, cost competitiveness, and supply continuity.
- Directed rapid platform and chipset decision-making, demand and supply planning, memory semiconductor shortage resolution, alternative sourcing, and manufacturing readiness to accelerate time-to-market, improve profitability, and mitigate the impact of rapid market price erosion across multiple OEM programs.

Outcome

- Reduced R&D costs by **85% (US\$3.0M to US\$0.45M)** and ERP inventory by **US\$7.2M (25.9%)**, improving working capital and operational efficiency.
- Recovered the cancelled **Samsung ODM program** by transitioning it to **Creative**, restoring production readiness within three months and delivering **over 100,000** cumulative units **within one year**.
- Established the China R&D Center, strengthening long-term ODM-to-OEM product development capability.
- Successfully led organizational transition by aligning cross-functional stakeholders, integrating Engineering, Manufacturing, Procurement, and Supply Chain, and resolving competing priorities following the Korea Business Unit transition.
- Promoted to **BU Team Lead** within six months and later became a **Founding Shareholder of Moosik Ltd.** in recognition of turnaround leadership.
- Successfully led the development and commercialization of **Lenovo ODM** consumer electronics products, achieving cumulative shipments exceeding **100,000 units within one year**.

Recommended Reference

Wang Shih Zen (*President, Moosik Ltd.; Vice President, Executive Director & Board Representative, Pine Technology Holdings Ltd.; Chairman & Chief Executive Officer, Z-Obee Holdings Limited — both HKEX-listed companies*)

- Recognized for outstanding planning and execution, leadership initiative, conflict resolution, risk management, and business development, supported by strong industry relationships.

4. Commercial Transformation, Product Growth & Market Expansion (1999–2001)

Highlights

- Led product strategy, commercialization, pricing, chipset strategy, and cross-functional execution across Product Development, Engineering, Procurement, Manufacturing, and Supply Chain while directing demand planning, supplier negotiations, material allocation, shortage resolution, risk management, and production continuity.
- Developed alternative DVD platform and chipset strategies using **C-CUBE, ESS, Sony, and DVS technologies** to optimize product positioning, cost competitiveness, supply continuity, risk management, and OEM commercialization for **Skymaster/SM Electronic GmbH/Thomson, Lafayette, and Philco**.
- Developed the second-generation **ESS DVD platform** as a cost-effective alternative to C-Cube, accelerating OEM commercialization and supporting high-volume OEM programs. During a critical DVD mechanism shortage, led executive supplier engagement and negotiations to secure approximately **50,000 DVD mechanisms**, maintaining production continuity and on-time customer deliveries.
- Successfully managed recurring Letters of Credit (L/Cs), each supporting orders of approximately **100,000 units** per customer, by leading critical commercial negotiations, resolving material shortages, coordinating late shipments, addressing L/C discrepancies, and aligning Engineering, Procurement, Manufacturing, Logistics, suppliers, and OEM customers to maintain production continuity and fulfill customer commitments during periods of critical component shortages.
- Concurrently served as Program Lead for **Toshiba's** proposed 300,000-unit OEM program, leading cross-functional Engineering, Manufacturing, Procurement, and Supply Chain teams to establish engineering capability, manufacturing readiness, and production ramp-up readiness.
- Directed strategic OEM programs from business opportunity through global product launch, integrating Engineering, Manufacturing, Procurement, Supply Chain, Sales, OEM customers, and technology partners.
- Directed rapid DVD platform and chipset decision-making, demand and supply planning, material allocation, and alternative sourcing to accelerate time-to-market, strengthen OEM competitiveness, improve profitability, and mitigate business risk during rapid technology transitions, component shortages, and market price volatility.
- Assumed expanded cross-company leadership following the Group's restructuring, coordinating commercial and product transitions across Ngai Lik Group and Denca.

Outcome

- Delivered **27.3%** revenue growth (**~US\$81M / HK\$631M**) while improving gross margin from **6.67% to 8.14%**.
- Promoted to Sales & Marketing Manager within six months and later transferred to Ngai Lik Group Headquarters to support Group-wide commercial transformation and cross-functional leadership.
- Recognized by colleagues, customers, and senior management as a trusted business and product development leader during the Group's executive transition.

Recommended References

Tan Hui See (Former MD/Sales & Marketing Director, Denca Limited; Former Managing Director, Dolby Asia)

- Recognized for professional integrity, ethical leadership, sound business judgment, and professionalism during organizational transition.
- Recognized for trusted business leadership, professionalism, integrity, and customer relationship management.

Raymond Tam (Chief Executive Officer, Cataleya Leatherware Company Ltd.; Executive Vice President, Orient Power (Wuxi) Digital Technology Co. Ltd.; Former Director of Production & Engineering, Ngai Lik Industrial Holdings Ltd.)

- Recognized for Group-wide DVD Program leadership, driving cross-functional integration, product development, manufacturing expansion, and production ramp-up during the Group's VCD-to-DVD transformation.
- Successfully resolved complex technical and operational challenges while consistently meeting senior management expectations.

Dennis Kwong (Assistant Marketing Director, Denca Limited.)

- Recognized for product development, OEM/ODM business growth, technical marketing, customer development, and business leadership.

5. OEM Business Transformation & Scale-up Leadership (1996–1999)

Highlights

- Selected to lead OEM business development and program execution for a newly established subsidiary, supporting the company's rapid organizational growth.
- Played a leading role in commercializing one of the company's first portable VCD OEM platforms by overcoming early MPEG technology constraints, limited hardware and firmware resources, and scarce reference designs while coordinating **Panasonic**, **SANYO**, and firmware partners.
- Established the OEM manufacturing foundation by developing BOM and part-number standards, engineering documentation, procurement, PMC, material planning, inventory control, master data, and operating procedures.
- Partnered with Finance to establish product costing, chart of accounts, Accounts Payable workflows, inventory valuation, and financial controls supporting manufacturing operations.
- Established the OEM operating system by implementing engineering, manufacturing, procurement, quality, inventory, and compliance processes to support scalable production and export operations.
- Directed end-to-end OEM product development, supplier management, manufacturing, and commercialization for **SANYO** and **DAEWOO** portable VCD products.

Outcome

- Supported organizational growth from approximately 500 to over 1,200 employees.
- Contributed to approximately 25% annual sales growth.
- Successfully established export-oriented OEM manufacturing capability for portable VCD products.

- Professional Reference Letter: Recognized for project engineering, cross-functional product development coordination, manufacturing readiness, and OEM program execution supporting **SANYO & DAEWOO OEM** programs.
- Engineering Experience Verification: Recognized for project engineering leadership, manufacturing readiness, technical coordination, and **SANYO & DAEWOO OEM program** delivery.

C.K. Chan (Director, Wai Kai Electronics (H.K.) Ltd.)

- Recognized for commercial leadership, strategic OEM business development, and leading cross-functional business execution across Engineering, Procurement, Manufacturing, Sales, and Marketing, supporting successful **SANYO** and **DAEWOO** OEM programs.

6. Design and Project Engineering Development (1994–1995)

Highlights

- Selected to join one of Hi-Tech Precision Products Ltd.'s **first strategic 300,000+ unit OEM** (Sony & Sansui) product development initiatives under the technical leadership of a contract-based Japanese Chief Engineer—a program that management had planned for **more than one year**—reflecting management's early recognition of my technical capability, initiative, accountability, cross-functional leadership, and execution excellence.
- Designed CD Player, CD Changer, and CD-Graphics hardware and PCBs for **Sony and Sansui OEM** programs.
- Supported OEM product development through hardware design, engineering testing, validation, safety evaluation, and production readiness.
- Demonstrated strong hardware design, product development, cross-functional execution, and engineering leadership capabilities, earning early recognition as a responsible, reliable, and high-potential engineer.

Outcome

- Successfully led engineering execution and production readiness through commercial launch within approximately nine months, completing the flagship technology transfer program approximately three months ahead of management's original implementation plan of more than one year while delivering **three Sony & Sansui OEM CD Player, CDG, and CD Changer programs totaling more than 300,000 planned units.**

Corporate Background: Hi-Tech Precision Products Ltd. operated within The Grande Holdings Group, whose subsidiaries included Hi-Tech Precision Products Ltd., TWD Industrial Company Limited, Sansui Enterprises Limited, Tomei Kawa Electronics International Limited, and other electronics-related businesses. The Group supported OEM/ODM manufacturing, technology partnerships, and brand licensing for leading Japanese consumer electronics companies, providing an environment for collaboration with senior engineering and management teams on global OEM product development and commercialization.

Executive Portfolio Overview

This portfolio complements my resume with documentary evidence supporting over 30 years of executive leadership in product development, engineering, manufacturing, supply chain, and commercial operations, including employment verification, professional references, technical documentation, and business achievements.

Note: This portfolio contains selected representative projects and documentary evidence. Several international executive appointments and consulting engagements in Indonesia, Malaysia, and Singapore were secured through executive referrals and long-standing professional relationships. Additional supporting documentation and project information are available upon request.

Executive Portfolio Appendix

The Executive Portfolio Appendix complements the Executive Portfolio and Executive Supporting Portfolio by providing additional documentary evidence of more than 30 years of executive leadership across global semiconductor companies, technology partners, ODM/OEM manufacturers, strategic suppliers, and international executive networks. It demonstrates technology strategy, chipset evaluation, supplier development, executive stakeholder engagement, manufacturing benchmarking, technology commercialization, and cross-functional leadership through representative historical records, executive meetings, business cards, and supporting project evidence.

Contents include:

- Global Semiconductor & Technology Ecosystem
- Strategic Supplier & Technology Partnerships
- Technology Strategy & Chipset Roadmaps
- Executive & Industry Network
- Technology Innovation & Commercialization
- International Executive Engagement
- Global Industry Visits & Manufacturing Benchmarking
- Representative Business Cards & Historical Supporting Evidence

Section 1 – Executive Portfolio Overview

Document	Purpose
Executive Engineering Portfolio Overview	Provides a visual summary of my engineering, product development, OEM/ODM, manufacturing, supply chain, e-commerce systems, mobile application development, and technical leadership experience across multiple companies, serving as an executive introduction to the supporting portfolio documents.

Section 2 – Business Performance & Achievement Evidence

Company	Document	Source	Purpose
Milo Enterprises Inc.	Edge AI Initiative & Innovation	S&RED Reports, IRAP, Project & SOW, NDA Docs	Led the Hybrid Edge AI Platform, driving platform strategy, embedded system architecture, outsourced AI development, delivery of AI Model Milestones 1–2 , and S&RED, IRAP, and BDC funding initiatives, achieving key technical breakthroughs and platform milestones within six months .
Dale (HK) Ltd.	Philips TDA8275A production version ready in early 2006 & purchasing Orders	Purchasing Orders & Reference Letters or Shipping Docs	Commercialized Philips RF Silicon Tuner-based DVB-T ODM platforms for Bang & Olufsen, METRONIC, Carrefour, Tesco, Skymaster, and ASDA/Walmart within six months .
Dale (HK) Ltd.	Timely 3-month OEM Recovery Program	Timely Reference Letter	Recovered a one-year-delayed Timely OEM/ODM program to first shipment within three months , helping resolve several million Hong Kong dollars of excess inventory and accelerating Timely's first notebook OEM program by two months .
Moosik Limited	Lenovo ODM Program	Reference Letter, Employment document	Led the end-to-end development and commercialization of a Lenovo ODM product , achieving commercialization within six months and cumulative shipments exceeding 100,000 units within one year . Demonstrated executive business, operational, and project leadership across engineering, NPI, manufacturing, supply chain, cost, quality, delivery, and supplier management.
Pine Technology Holdings Ltd.	Public Annual Report Performance Evidence (Samsung ODM Program Recovery)	Creative Annual Report 2002 and Management Correspondence	Led the three-month Samsung ODM program recovery , enabling commercial launch and cumulative shipments exceeding 100,000 units to Creative Technology within one year. Demonstrated leadership in engineering trade-off resolution, manufacturing validation, production recovery, supplier coordination, QA transition, and production ramp-up.
Pine Technology Holdings Ltd.	Public Annual Report Performance Evidence (Inventory Reduction & Working Capital Improvement)	HKEX Annual Reports and Management Correspondence	Led inventory optimization and operational transformation achieved during my employment, including a US\$7.2 million (25.9%) reduction in ERP inventory and an 85% reduction in R&D costs (from US\$3.0M to US\$0.45M) within two years . Both ERP inventory and R&D costs reached their lowest levels across the five-year period before and after my employment.
Ngai Lik Industrial Holdings Ltd.	Public Annual Report Performance Evidence (Revenue Growth & Profit Margin Improvement)	HKEX Annual Reports and Reference Letters	Led the company's DVD product commercialization and cross-functional program execution, enabling production ramp-up during my employment and contributing to approximately US\$81 million (HK\$631 million) in revenue growth while improving gross margin from 6.67%

			to 8.14% within two years. This represented the company's strongest revenue growth and profitability performance across the five-year period before and after my employment.
Hi-Tech Precision Products Ltd.	Professional Reference Letters	Portfolio website	Successfully led engineering execution and production readiness through commercial launch within nine months , delivering three Sony & Sansui OEM CD Player, CDG, and CD Changer programs supporting OEM production totaling more than 300,000 planned units .

Section 4 – Technical Innovation & Intellectual Property

Company	Document	Purpose	Issued
Patent (China)	Utility Model Patent Certificate – Bluetooth Indoor Positioning System	Demonstrates early innovation in Bluetooth-based indoor positioning technology, preceding Apple's public introduction of iBeacon at WWDC 2013.	9 Feb 2013
The Hong Kong Polytechnic University	Micro Fund Programme - AI 3D Fitting Project	Demonstrates innovation, entrepreneurship, product commercialization, and business model development. The AI 3D e-commerce virtual fitting project was recognized as one of the top-performing teams among approximately 200 participating teams.	2025
Milo Enterprises Inc.	ASET Engineering Competency Documentation (<i>Association of Science & Engineering Technology Professionals of Alberta</i>)	Verified by Milo Management – Edge AI Embedded System Design, Chipset Strategy & Embedded System PoC Date: 5 Jan 2026	Jan 2026
Milo Enterprises Inc.	NRC IRAP Innovation Funding Initiative	Initiated project feasibility assessment, prototype validation, project review, and innovation funding engagement with NRC IRAP to support the development of the Hybrid Edge AI Platform. First engagement: 23 Mar 2026.	Mar-May 2026
Milo Enterprises Inc.	Hybrid Edge AI Platform – AI Model	Developed the AI Model Development Statement of Work (SOW), Acceptance Criteria, and Project Governance framework for outsourced AI engineering. Successfully completed Milestones 1 and 2. Prepared by Francis Tai – Project Lead, formally issued and signed by the third-party development partner on 19 Mar 2026.	Mar 2026
Milo Enterprises Inc.	Hybrid Edge AI Platform – Hardware & Firmware	Developed the Hardware, Firmware & System Architecture Development SOW, defining project scope, technical deliverables, system architecture, milestones, and project governance. Prepared by Francis Tai – Project Lead, formally issued and signed by the third-party development partner 7 May 2026.	May 2026
Milo Enterprises Inc.	Edge AI Embedded System Validation, Digital Filter Design (SR&ED Experiment) & Patent Feasibility Assessment	Validated embedded AI acoustic signal processing, digital filter design, environmental noise constraints, FFT-based signal analysis, and PoC design validation for Edge AI insect detection. Supported by four SR&ED technical experiment reports.	Feb -Apr 2026
Dale (HK) Ltd.	ASET Engineering Competency Documentation (Selected OEM/ODM Engineering Examples)	Verified by Dale Management: Demonstrates engineering competency in OEM/ODM product development, PCB & BOM engineering, manufacturing readiness, supplier management, and technical program execution. Prepared to support ASET competency assessment.	Dec 2025
Wai Kai Electronics Ltd.	ASET Engineering Competency Documentation	Verified by Kenny Chen – Wai Kai Chief Electronic Engineer / Engineering Lead: Recognized for project engineering leadership, manufacturing readiness, technical coordination, and SANYO & DAEWOO OEM program delivery.	Dec 2025
Hi-Tech Precision Products Ltd.	ASET Engineering Competency Documentation	Verified by Wong Keung – Former Engineering Supervisor (Audio Testing & Product Validation): Recognized for R&D electronic engineering, Sony & Sansui OEM CD Player, CD-Graphic (CDG) & CD-Changer product development, production readiness, technical coordination, and cross-functional collaboration	Dec 2025

Section 5 – Executive Leadership & Business Transformation Evidence

Company	Document	Purpose
Pine Technology Holdings Ltd.	Executive Business Transformation Memorandum to the Top Management Board- Prepared by Francis Tai in his capacity as BU Team Lead – Business Transformation & Change Lead, Pine Technology Holdings Ltd. (2002)	Demonstrates executive strategic thinking, organizational transformation, business turnaround, cross-functional leadership, supplier management, inventory optimization, operational improvement, and executive communication through strategic recommendations presented directly to the Top Management Board.

Section 6 – Commercial Supporting Documents (Optional – Available Upon Request)

Company	Document	Purpose
Circle Bakery (Client Project)	Client Authorization Letter (Google Play Developer Support)	Demonstrates client authorization for me to represent the company in technical and operational matters relating to its Google Play Developer account and a Hong Kong government-funded mobile application project, supporting my role in project management, technical coordination, and client representation.
Dale (HK) Ltd.	iMAP System Patent & Website Commercialization Evidence (2012–2014)	Demonstrates the development and commercialization of the iMAP BLE 4.0 Indoor Mapping, Proximity Marketing and Mobile Payment platform, including system architecture, patent development, website launch, mobile application development, and commercial deployment.
HF Group (Parent Company of METRONIC Europe)	European Distribution & Rebate Agreement	Demonstrates Dale (HK) Ltd.'s commercial supplier relationship with HF Group, one of its European customers and the parent company of METRONIC Europe, supporting distribution through its subsidiaries in the United Kingdom, France, Italy, Spain, and the Netherlands, cumulative purchase volume-based rebate (bonus) agreements, and shorter supply lead times.
Dale (HK) Ltd.	Strategic Procurement, Purchase Orders & OEM/ODM Delivery Execution	Title: Strategic Chipset Procurement, Purchase Orders, Rebate & Short Lead-Time Delivery Evidence for Selected OEM/ODM Product Development Projects Demonstrates strategic semiconductor procurement, management of purchase orders exceeding US\$600K driven by wafer MOQ constraints, partial shipment coordination, supplier rebate program management, and short lead-time delivery execution for OEM/ODM manufacturing. Includes representative supporting evidence of chipset procurement, OEM/ODM product development, firmware enhancements, PCBA/SMT engineering, and commercial execution for Bang & Olufsen, AKAI, TCL, and DXG projects. Note: Additional OEM/ODM engineering examples are available upon request.
Dale (HK) Ltd.	Philips RF Silicon Tuner (DVB-T) Rapid Commercialization Evidence (5-Page Full Pack)	Demonstrates rapid commercialization of Philips RF Silicon Tuner (DVB-T) through purchase orders, PCBA/SMT engineering, manufacturing compliance, and cross-functional execution, supporting production readiness (estimated ~6-month ODM development cycle).

Note (2): These documents are supplementary commercial records retained for verification purposes and are available upon request. They are not required to substantiate my employment history or professional references.

Section 7 – Professional Endorsements & Support Network

Name	Organization	Position	Relationship	Year
Professor Gábor Vajta	Central Queensland University (Australia)	Adjunct Professor	ITSP Innovation Project Support	2016
Professor Hung Yick Hin	The Hong Kong Polytechnic University	Professor of Practice		2016
Dr. Cheng Zhuo	The Hong Kong Polytechnic University	Associate Professor		2016
Dr. Mingyan Xu	HaploX Biotechnology Co., Ltd. (China)	CEO & Founder		2016
Dr. Pattarin Sridulyakul	Pulse Science Co., Ltd. (Thailand)	Vice President & Product Manager		2016
Mr. Lin Kwong Lee	Chinese People's Political Consultative Conference (CPPCC), Foshan City (Chancheng District), China Gold Clever Investment Co., Ltd. Adwin Holding Co., Ltd. (Hong Kong)	Councillor; Chairman; Director		2016

Section 8 – Professional Innovation Engagement & Research Network

Executive Learning • Academic Engagement • Technology Innovation • Emerging Technology Research • AI Commercialization

Prof. Eric W. T. Ngai

Distinguished Research Professor

Associate Director, Research Institute for Artificial Intelligence of Things (RIAIoT)

The Hong Kong Polytechnic University

- Maintained professional contact since 2021.
- Exchanged professional perspectives on **Generative AI, AIoT, IoT**, digital transformation, technology strategy, innovation management, smart manufacturing, and AI commercialization.
- Received selected IEEE research publications shared by Prof. Ngai as part of ongoing professional knowledge exchange and continuous executive development.
- Continue to follow the latest academic research led by **Prof. Ngai in Artificial Intelligence of Things (AIoT), IoT**, information systems, digital innovation, supply chain, knowledge management, smart manufacturing, AI-enabled applications, and emerging technology commercialization, including selected research on Generative AI for fashion design and smart textile/e-textile applications.
