Hi,

My name is Francis Tai, and I'm with Milo Enterprises Inc., a Vancouver-based electronics product development company.

We are developing an edge AI-based environmental sensing system for detecting and classifying small biological targets using multi-modal sensing (acoustic, vision, and environmental data) under real-world noise, power, and latency constraints.

The project involves technical uncertainties in detection reliability, sensor fusion effectiveness, and edge AI performance under constrained environments.

I would like to connect with an Industrial Technology Advisor to explore IRAP support for feasibility and prototype validation.

I am available for a call at your convenience and can be reached at: +1 825-935-

Best regards,

Francis Tai, MBA, BEng (UK), Lean Six Sigma Black Belt
Product Development, Supply Chain & Manufacturing Manager
