

PROFESSIONAL EXPERIENCE

Manufacturing, Supply Chain & Product Development Manager | Edge AI Program Lead

Milo Enterprises Inc., Vancouver, BC | Nov 2025 – Jun 2026

- Led development of an Edge AI-enabled IoT platform, including system architecture, chipset strategy, hardware and firmware requirements covering memory, power, noise, and cost constraints, PoC, and outsourced AI model development, while supporting NRC IRAP and BDC innovation initiatives and engineering outsourcing.
- Led project execution, coordination, and risk control from concept through development and validation.
- Designed and conducted four SR&ED technical experiments covering digital filter design, acoustic signal processing, FFT-based analysis, environmental noise constraints, and Edge AI design validation for detecting small, fast-moving objects at millimetre scale, together with a patent feasibility assessment.
- Supported quality, manufacturability, and production improvements for existing products.
- Left the company amid similar circumstances affecting at least 4 colleagues who departed within one to two months, after completing my assigned work, including the system architecture, hardware and firmware high-level design, and BOM definition. Supporting documentation available upon request.

Director | Product Strategy, Digital Product Development & Operations | P&L

Woods Global Ltd., Hong Kong | Apr 2021 – Apr 2025

- Led mobile application and online operations, coordinating cross-functional execution across Engineering, Operations, QA, Sales, Marketing, and Finance for in-house and client e-commerce platform development and digital solutions, including PayPal/Stripe and Tidio AI chatbot integration, and vendor and manufacturer management—including ENTERBAY NBA action-figure distributorship for Hong Kong, Taiwan, Singapore, and the Philippines, and Singapore TIGER BRAND F&B products.
- Managed day-to-day operations covering inventory, order fulfilment, logistics, customer service, returns/RMA, and vendor coordination for consumer products and e-commerce operations across Hong Kong and regional markets.
- Provided mentorship and technology leadership for a PolyU Micro Fund-supported AI-enabled Try-On 3D e-commerce platform, recognized as a top-performing project among approximately 200 participating teams, leading a multidisciplinary team including a PhD-qualified AI/ML Chief Engineer and mentoring four final-year undergraduate students and one MSc student across technology strategy, product development, and commercialization.

Director | Product Development, Manufacturing & Supply Chain | P&L

Dale (HK) Limited, Hong Kong | 2004 – 2019

- Served as the Business Integration Leader in building and scaling up a new ODM/OEM business, aligning Sales, Finance, Engineering, Sourcing & Procurement, Production, Manufacturing, Supply Chain, Marketing, Quality, and strategic partners to translate customer requirements and business priorities into financial performance.
- Led ODM/OEM product development, contract manufacturing, supply chain, commercial operations, and P&L, delivering products from concept through NPI, mass production and commercialization.
- Commercialized high-volume OEM/ODM platforms including DVD/DivX (200,000+ units), digital cameras (50,000+ units), and Philips RF Silicon Tuner-based DVB-T receivers (100,000+ units), with DVB-T commercialized within six months for Bang & Olufsen, METRONIC, SM/Skymaster, Carrefour, Tesco, and ASDA/Walmart.
- Improved manufacturing throughput by 10%+, achieved approximately 95% on-time delivery, and reduced production lead times from 60+ days to approximately 30 days through Lean manufacturing, supplier collaboration, demand and supply planning, production planning, and end-to-end operational optimization.
- Established strategic supplier and manufacturing partnerships with listed companies across China and Taiwan, including TCL, DXG, and Seastar, and directed semiconductor procurement commitments exceeding US\$600K per order, new-chipset wafer commitments, custom firmware, commercial rebates, supplier qualification, sourcing strategy, capacity planning, phased deliveries, and supply chain risk mitigation.
- Defined chipset platform strategy by selecting Philips Semiconductors as the primary production platform while evaluating STMicroelectronics and other alternatives to optimize product performance, cost competitiveness, scalability, supply continuity, and OEM differentiation.
- Recovered a one-year-delayed Timely ODM program to first shipment within three months, helping resolve several million Hong Kong dollars of excess inventory, improve inventory utilization and working-capital efficiency, and accelerate the manufacturing partner's first notebook OEM program by two months.

- Established performance and governance reviews and standardized engineering and production processes, improving execution discipline, management visibility, and accountability; implemented EMC heatsink and SMT/QC/RF test-point improvements to enhance product reliability, first-pass yield, and OTD while reducing manufacturing costs.
- Strengthened supplier and vendor management and product quality through Skymaster RMA, small-BGA IC PCBA repair and WIP process improvements, and Bang & Olufsen zero-defect requirements, while improving EMS factory compliance through validation, root-cause analysis, AQL standards, and leadership of Walmart EHS and ISO audit.

Vice President | Product Development, Manufacturing & Supply Chain | Marketing & Project Management

Pine Technology Holdings Ltd. / Moosik Ltd., Hong Kong | 2001 – 2004

- Promoted to Internet Appliance (IA) Business Unit Team Lead within approximately six months during a business transformation and subsequently transferred to Moosik Ltd., a Pine spin-off focused on developing a new OEM consumer electronics business; appointed Vice President of Marketing & Project Management and became a Shareholder.
- Managed product categories across BUs in Korea, the US, Canada, Asia, and Europe, spanning retail-channel distribution, supply chain, and product strategy during the transition toward an OEM-focused business model, including distribution-channel demand and supply priorities, product phase-out, finished-goods reduction, and resource reallocation.
- Led the R&D-focused Korea BU closure and associated project transfer, with expanded responsibilities across Business, Purchasing, PMC, Logistics, RMA, and Project Management, resolving conflicts while improving CQD, operational KPIs, and business performance, contributing to business turnaround.
- Recovered the cancelled Samsung ODM program within approximately three months through product redesign, platform integration, supplier coordination, NPI, manufacturing readiness, and production ramp-up, delivering 100,000+ cumulative units to Creative within one year.
- Led OEM consumer electronics programs for Lenovo and other brands at Moosik Ltd., from concept through engineering, NPI, production readiness, and commercial launch within approximately six months, achieving cumulative major platform shipments exceeding 100,000 units within one year.
- Reduced ERP inventory from **US\$24.5M to US\$20.7M** by approximately **US\$3.9M (15.7%)** within the first year, strengthening working capital, inventory control, and operational efficiency.
- Reduced R&D costs by **85% (US\$3.0M to US\$0.45M)** within two years through ODM-to-OEM business transformation, design standardization and optimization, and supplier collaboration.
- Directed product platform, lifecycle, and chipset strategies by evaluating Texas Instruments, Cirrus Logic, Sigmatel, and alternative DSP solutions, defining product positioning and target OEM markets while balancing technology differentiation, customer requirements, manufacturability, cost competitiveness, and supply continuity.
- Established OEM design and operating governance across PCBA design and assembly, BOM, ECN, ERP, PMC, QA/IQC/AQL, supplier qualification, production control, material and capacity planning, and material and supplier management.
- Recovered and optimized the Sporty MP3 Discman ODM program across design, manufacturing, supply chain, financial, and commercial constraints, including production throughput, product quality and reliability (CD opening force, anti-shock buffer, and drop-test performance), tooling design and limitations, and BOM cost, while balancing R&D design objectives, client requirements, manufacturing and financial requirements, management priorities, and program cost, budget, and deadlines.
- Supported organizational change and stakeholder engagement during restructuring, aligning multi-region distribution forecasts, demand and supply priorities, new product designs, and project updates while managing NAND flash price volatility and shortages that resulted in 30%+ product margin erosion and increased inventory risk.
- Left the company after completing assigned projects and the outstanding Lenovo shipment, while maintaining professional and commercial integrity as a shareholder. Separately, during a period of NAND flash price volatility, management prioritized NAND flash trading at US\$5+ profit per unit and available supply was redirected, affecting other committed customer orders and resulting in short shipments.

Sales & Marketing Manager | New Product & Program Lead

Ngai Lik Industrial Holdings Ltd. / Denca Ltd., Hong Kong | 1999 – 2001

- Selected and promoted to Sales & Marketing Manager within approximately six months during Group-wide and Denca-level executive management transitions and transferred to Ngai Lik Holdings headquarters as New Product & Program Lead, leading six Assistant Sales Managers and serving in a cross-functional role across product and chipset strategy, OEM/ODM product development, new business growth, and DVD expansion within a manufacturing organization of approximately 15,000 employees.
- Served as Group Business Integration & Program Leader during restructuring, coordinating Sales, Finance, Engineering, Procurement, Manufacturing, Supply Chain, and executive stakeholders to align business priorities, operational performance, OEM/ODM growth, and sustainable business outcomes.

- Contributed to **27.3% revenue growth (~US\$81M/HK\$631M) during approximately 18 months** of employment through market development, commercial strategy, and cross-company integration leadership.
- Led a major Group business and product transformation from VCD/audio products to DVD platforms, directing portfolio strategy and demand forecasting while supporting supply and production planning, manufacturing readiness, production ramp-up, and execution to accelerate commercialization.
- Directed technology/platform strategy across C-CUBE, ESS, Sony, and DVS, integrating customer requirements, cost competitiveness, supply continuity, market intelligence, and technology roadmaps to accelerate market adoption.
- Protected business and production continuity during a critical component shortage by securing approximately 50,000 DVD mechanisms from a listed-company competitor, while resolving L/C short-shipment discrepancies and mitigating supply disruption, payment exposure, commercial penalties, emergency freight costs, price-discount pressure, finished-goods inventory exposure, order-cancellation risk, and rapid market price erosion.
- Developed and managed recurring 100,000-unit orders for Philco/Lafayette in North America, Best Price, SM/Skymaster, and other international customers, demonstrating high-volume OEM/ODM commercialization.
- Led the proposed 300,000-unit Toshiba OEM program through several months of new product development, production capacity and R&D capability evaluation, coordinating Engineering, Procurement, and Project Management, and working with chipset suppliers and Sony as the total DVD solution provider while competing with major listed ODM manufacturers.
- Maintained professional and commercial integrity in customer and program dealings by declining a personal financial benefit of US\$0.30–US\$0.50 per unit offered in connection with a commercial discount related to two delayed 100,000-unit shipments, and reporting the matter to the Chairman, management, and former Director Hui See Tan.
- Demonstrated professional and commercial integrity in handling a separate client-referral matter involving a close personal friend of the GM of a Taiwan-listed company, following three consecutive 100,000-unit orders, appropriately addressing the matter and reporting it to the Chairman, management, and former Director Hui See Tan.
- Resigned for family reasons after completing the assigned task, following discussions with company management and former Director Hui See Tan, and subsequently undertook three months of training in Thailand.

Manager – Project Engineering & OEM Programs

Wai Kai Electronics Ltd., Hong Kong | 1996 – 1999

- Recruited by a former Hi-Tech Precision colleague, C.K. Chan, and promoted to Operations & Marketing Manager within approximately six months, supporting rapid organizational growth from approximately 500 to over 1,200 employees.
- Served as the Integration Leader, aligning cross-functional teams and strategic partners to support the transformation of a newly established Hong Kong subsidiary from a domestic audio distributor to an OEM consumer electronics manufacturer, contributing to approximately 25% annual sales growth.
- Directed OEM programs for Tiger Electronics for Hasbro, Lenoxx, and other brands from concept through sourcing, prototyping, tooling, assembly, and shipment, while managing A/P, A/R, and commercial risk, achieving major product launches within approximately six months and cumulative shipments exceeding 100,000 units for each major program.
- Led one of the company's first portable VCD OEM platforms for SANYO and DAEWOO when the business had no established OEM track record, overcoming early MPEG technology and supplier-support constraints, including independently travelling to Shanghai to work directly with Panasonic and its distributor on MPEG module supply and firmware support for the SANYO mechanism.
- Managed OEM operations across customer teams, sourcing/procurement, supplier management, production control, production planning, PMC/material planning, shipping/logistics, quality, inventory control, BOM/part-number management, QA/IQC, AQL, ECN, UL/CE/EMC/EN 71/ISO 9000 compliance, product industrial design and rendering, tooling improvement, product reliability and quality improvement, and cost control.
- Completed all MSc coursework in Electronic Engineering, together with LLC accounting studies to support cross-functional role requirements, while managing full-time professional responsibilities at Wai Kai, demonstrating sustained commitment to assigned work, accountability, and continuous improvement; the final MSc project was not completed due to work commitments.

Electronic Engineer | Product Engineering, Manufacturing & DFM

Philips Hong Kong Limited (Sound & Vision) | 1995 – 1996

- Supported Design for Manufacturing (DFM), product transfer from R&D to manufacturing, pilot runs, and mass production for Sound & Vision products within cross-functional engineering and manufacturing teams, covering PCB design, tooling, BOM, SMT and assembly, yield, and production problem-solving, with continuous improvement in product cost, reliability, quality, and PPM defect reduction from pilot run through mass production.

R&D Electronic Engineer

Hi-Tech Precision Products Ltd. (Member of The Grande Holdings Group, Hong Kong-listed; 2,500+ manufacturing workforce)
| 1994 – 1995

- Selected as a designer and project coordinator under a contract-based Japanese Chief Engineer, working across Group and company management, Sony & Sansui multi-region Business Units, Sony Semiconductor, Sony engineering design teams, and internal Engineering, Sourcing and Procurement, Manufacturing, and Quality teams.
- Supported three Sony & Sansui OEM transfer programs, including one CD player schematic and PCB redesign covering the main board, panel board, and power board for a new lower-cost mechanism and new driver IC, new tooling design and locally sourced components, firmware/UI localization across 5+ countries, three pilot runs, and product and production launch within approximately nine months, with the first program completed approximately three months ahead of plan.
- Resigned after completing assigned projects and following the departure of the Chief Engineer, after discussions with management and receiving a positive reference from an authorized company manager, to pursue the next stage of professional development; subsequently joined Philips and was later recruited by former Hi-Tech colleague C.K. Chan to join Wai Kai.

EDUCATION

- Master of Business Administration (MBA) - The Hong Kong Polytechnic University
- B.Eng. (Hons.) Electronic & Electrical Engineering - University of Leeds, United Kingdom
- Postgraduate Diploma in Electronic Engineering - (MSc Coursework Completed)
The Hong Kong Polytechnic University

PROFESSIONAL CREDENTIALS

- ASCM CPIM – Certified in Planning and Inventory Management
- Lean Six Sigma Black Belt

LANGUAGES

- English — Professional
- Chinese (Cantonese and Mandarin) — Native
- Indonesian — Conversational
