

EXECUTIVE PROFESSIONAL PORTFOLIO

Version 1.0 | July 2026

Documentary Evidence Supporting Executive Leadership in Business Transformation, Product Development, Engineering, Manufacturing, Supply Chain & Commercial Operations across Asia-Pacific (Hong Kong, Taiwan, China, Korea, Malaysia, Indonesia, Singapore), Europe and North America.

Executive Portfolio Website: <https://francistai.github.io>

Business Performance Highlights

- Recognized by executive management as a trusted business leader, repeatedly selected for expanded leadership responsibilities to lead strategic organizational transformation, business turnarounds, and growth initiatives.
- Delivered 27.3% revenue growth (~US\$81M / HK\$631M) and improved gross margin from 6.67% to 8.14% through commercial product growth, market expansion and cross-company leadership during organizational transformation.
- Reduced lead time from 60+ days to approximately 30 days through manufacturing and supply chain optimization.
- Improved manufacturing throughput by 10%+ while achieving approximately 95% on-time delivery.
- Reduced ERP inventory by US\$7.2M, improving operational efficiency and working capital control.
- Reduced R&D costs by 85% (from US\$3.0M to US\$0.45M) through strategic ODM/OEM business transformation, platform standardization, design optimization and supplier collaboration.
- Contributed to 25% annual company growth, supporting expansion from approximately 500 to over 1,200 employees through business expansion and organizational transformation.
- Commercialized one of the smallest and best-value DVB-T digital TV receiver platforms in Europe, achieving large-scale distribution through leading international retailers.
- Led international OEM/ODM product development, manufacturing, supply chain and P&L across Asia, Europe and North America.
- Led business transformation initiatives for connected devices, Edge AI, IoT and smart hardware platforms, including concept definition, system architecture, chipset selection, product design, IRAP project development, BDC funding initiatives, and SR&ED experimental development and engineering activities. Delivered key platform architecture, product design, and strategic funding documentation within three months of appointment as Product Development Lead.

1. Connected Devices, Edge AI & Industry 4.0 Platform (Oct 2025–Jun 2026)

Highlights

- Led product strategy, system architecture, and roadmap development for an Edge AI-enabled IoT platform integrating intelligent sensing, embedded AI, connected devices, and real-time analytics.
- Defined product requirements, chipset strategy, supplier engagement, and deployment roadmap from concept through production readiness.
- Directed cross-functional execution across hardware, firmware, AI/ML, suppliers, manufacturing partners, and business stakeholders.
- Developed scalable Edge AI, gateway, and cloud analytics architecture supporting Industry 4.0, intelligent monitoring, computer vision, and connected-device applications.

Outcome

- Established a scalable AIoT platform architecture supporting future product commercialization.
- Demonstrated feasibility through prototype validation, technology integration, and commercialization

2. Consumer Electronics & Connected Hardware Portfolio (2004–2019)

Highlights

- Built and led R&D, product management, OEM/ODM engineering, manufacturing, procurement, and global supply chain operations across China and Taiwan.
- Managed hardware product portfolios from product strategy, chipset platform strategy, product definition, NPI, commercialization, and mass production.

- Delivered high-volume ODM/OEM consumer electronics programs for Carrefour, Tesco, ASDA/Walmart, Bang & Olufsen, and METRONIC, while coordinating contract manufacturing partners including DXG (Taiwan-listed), TCL, and Seastar (China-listed).
- Optimized manufacturing cost, inventory, and operational efficiency through strategic supplier and customer rebate programs, Lean process improvements, and end-to-end supply chain optimization.
- Defined chipset platform strategy by selecting Philips Semiconductors as the primary production platform while evaluating STMicroelectronics alternatives to optimize cost competitiveness, product scalability, supply flexibility, and OEM differentiation.
- Developed and executed a strategic semiconductor procurement and phased-delivery strategy supporting a 100K-unit ODM program commitment, mitigating supply risks arising from extended supplier lead times and demand uncertainty to enable early adoption of a new-generation Philips chipset, including semiconductor purchase orders exceeding US\$600K, while coordinating custom firmware integration with iWedia and later Hyperpanel.

Outcome

- Improved manufacturing throughput by over 10%.
- Achieved 95% on-time delivery.
- Reduced manufacturing and supply chain lead times from 60+ days to approximately 30 days by synchronizing phased weekly semiconductor deliveries with production demand.
- Successfully commercialized one of Europe's smallest and best-value DVB-T digital TV receiver platforms for the European consumer market.

Recommended References Summary

References

Zhengjie Dong (*Ex-Managing Director, iWedia China*)

Recognized for technical leadership in Philips–Dale DVB-T ODM/OEM programs, including firmware integration, hardware–software coordination, engineering validation, production readiness, and effective cross-company collaboration with chipset vendors, software developers, and customers.

Nicolas Lamblain (*R&D Manager, METRONIC S.A.S.*)

Recognized for technical excellence in OEM/ODM product development, new product introduction (NPI), engineering evaluation, chipset selection, cost-down initiatives, rebate program coordination, technical problem-solving, and cross-functional support from product development through production readiness.

3. OEM/ODM Product Transformation (2001–2004)

Highlights

- Led the ODM-to-OEM business transformation and product portfolio expansion across multiple programs for Lenovo, Creative, Samsung, and other global consumer electronics brands by directing product strategy, roadmaps, supplier management, manufacturing readiness, and cross-functional execution across engineering, supply chain, manufacturing, and quality.
- Defined chipset selection, pricing, supplier strategy, and cost reduction and inventory optimization strategies to support the business turnaround.

Major Commercial Programs: Creative MP3 Discman Player & Lenovo OEM MP3 Player

- Samsung ODM program was discontinued due to design constraints, tooling limitations, stringent drop-test requirements, and schedule delays.
- Following the Korea team transition, assumed BU Team Lead responsibilities and led product redesign, platform integration, resolution of critical engineering and program trade-offs, chipset and tooling strategy, supplier coordination, reliability engineering, QA validation, NPI, production readiness, team integration, and manufacturing ramp-up to mass production.
- Restructured the Korea R&D organization through product standardization, resource optimization, engineering cost reduction, and establishment of the China R&D Center.
- Improved overall manufacturing throughput, product quality, reliability, and team productivity, enabling successful product commercialization and business turnaround.
- Directed product technology platform, product lifecycle, and chipset strategy by evaluating Texas Instruments, Cirrus Logic, Sigmatel, and alternative DSP solutions, defining product positioning and target

OEM markets while balancing technology differentiation, customer requirements, performance, manufacturability, cost competitiveness, and supply continuity.

Outcome

- Reduced R&D costs from US\$3.0M to US\$0.45M (85%) and ERP inventory by US\$7.2M (25.9%), significantly improving working capital and operational efficiency.
- Successfully commercialized OEM programs for Creative and Lenovo, each achieving cumulative shipments exceeding 100K units.
- Established the China R&D Center, supporting sustainable ODM-to-OEM transformation and long-term product development capability.
- Successfully led organizational transition within a complex matrix organization by aligning cross-functional stakeholders, overcoming resistance to change, resolving competing functional priorities, and integrating engineering, manufacturing, procurement, and supply chain teams following the Korea Business Unit transition.
- Promoted to BU Team Lead within six months and later became a Founding Shareholder of Moosik Ltd. in recognition of turnaround leadership.

Recommended References Summary

References

Wang Shih Zen (*President, Moosik Ltd.*)

Recognized for outstanding planning and execution, conflict resolution, risk management, leadership initiative, and business development, with strong industry relationships and the ability to deliver results in complex business environments.

4. Commercial Transformation, Product Growth & Market Expansion (1999–2001)

Highlights

- Supported Engineering, Operations, and Procurement during the Group's executive leadership transition and technology migration from VCD and audio products to DVD platforms by establishing new manufacturing capability at Denca through the setup and ramp-up of six new DVD production lines supporting product development, production readiness, OEM commercialization, and business expansion.
- Led product strategy, product roadmap, commercialization, pricing, chipset strategy, and cross-functional execution across Product Development, Engineering, Procurement, Manufacturing, and Supply Chain while directing demand forecasting, supplier negotiations, component allocation, material booking, shortage resolution, and supply planning to ensure production continuity and on-time OEM deliveries during rapid market growth and supply volatility.
- Developed alternative DVD platform strategies using C-CUBE, ESS, Sony, and DVS technologies, balancing technology selection, product positioning, customer requirements, cost competitiveness, material availability, supply continuity, and commercialization objectives for OEM customers including Skymaster/SM Electronic GmbH, Thomson, and Philco.
- Directed strategic OEM customer programs from business opportunity through commercialization, integrating Engineering, Manufacturing, Procurement, Supply Chain, Sales, customers, and strategic technology partners to deliver successful product launches, production readiness, customer satisfaction, and sustainable business growth.
- Assumed expanded cross-company leadership responsibilities following the Group's corporate restructuring, maintaining business continuity while coordinating the Group-wide commercial and product transition across Ngai Lik Group and Denca.

Outcome

- Delivered 27.3% revenue growth (~US\$81M / HK\$631M).
- Improved gross margin from 6.67% to 8.14%.
- Promoted to Sales & Marketing Manager within six months and subsequently transferred to Ngai Lik Group Headquarters to support Group-wide commercial transformation and provide cross-functional leadership across Engineering, Operations, Manufacturing, Procurement, Supply Chain, and strategic customer programs.
- Recognized as a trusted, professional, and well-respected business and product development leader by colleagues, customers, and senior management during executive leadership transition.

Recommended References Summary

References

Tan Hui See (*Former Sales & Marketing Director, Denca Ltd.*)

Recognized as a trusted and well-respected business and product development leader by colleagues, customers, and senior management for professionalism, integrity, customer relationship management, and leadership during executive transition.

Dennis Kwong (*Assistant Marketing Director, Denca Ltd.*)

Recognized for outstanding product development, OEM/ODM business performance, technical product marketing, customer development, and leadership, leading to promotion to Sales & Marketing Manager.

Raymond Tam (*Former Director of Production & Engineering, Ngai Lik Industrial Holdings Ltd.*)

Recognized for Group-wide DVD Program Leadership, cross-functional integration, manufacturing capability expansion, product development, and successful production ramp-up during the Group's VCD-to-DVD transformation.

5. OEM Business Transformation & Scale-up Leadership (1996–1999)

Highlights

- Selected to lead OEM business development and program execution for a newly established subsidiary, supporting the company's rapid organizational growth.
- Played a leading role in commercializing one of the company's first portable VCD OEM platforms by overcoming early MPEG technology constraints, limited hardware and firmware development resources, and scarce reference designs while integrating Panasonic, SANYO, and firmware partners.
- Built the OEM manufacturing foundation by establishing BOM and part-number standards, engineering documentation, procurement processes, PMC, material planning, inventory control, engineering and manufacturing master data, and OEM operating procedures.
- Partnered with Finance to establish product costing, chart of accounts, Accounts Payable workflows, inventory valuation, and financial controls supporting manufacturing operations.
- Established the OEM manufacturing operating system by implementing engineering, manufacturing, procurement, quality, inventory, and compliance processes to support scalable production and export operations.
- Directed end-to-end OEM product development, supplier management, manufacturing, and commercialization for SANYO and DAEWOO portable VCD products.

Outcome

- Supported organizational growth from approximately 500 to over 1,200 employees.
- Contributed to approximately 25% annual sales growth.
- Successfully established export-oriented OEM manufacturing capability for portable VCD products.

References

- Chen Ming Fai (Kenny)
Chief Electronic Engineer / Previous Owner (Design Services Provider to Wai Kai Electronics Ltd.)
Professional Reference Letter: Recognized for OEM product development, engineering coordination, hardware & firmware integration, supplier collaboration, and manufacturing readiness.
Engineering Experience Verification: Verified engineering leadership, BOM governance, production readiness, technical documentation, and OEM project execution.
- C.K. Chan (*Director, Wai Kai Electronics (H.K.) Ltd.*)
Recognized for commercial leadership, OEM business development, strategic planning, cost analysis, and cross-functional leadership across engineering, procurement, manufacturing, sales, and marketing.

6. Design and Project Engineering Development (1994–1995)

Highlights

- Designed CD Player, CD Changer, and CD-Graphics hardware and PCBs for Sony and Sansui OEM programs.
- Supported product development through engineering design, testing, validation, safety evaluation, and production readiness.
- Developed a solid engineering foundation in hardware design, firmware testing, technical problem-solving, and cross-functional product development.

Outcome

- Delivered Sony and Sansui OEM CD Player, CD-Graphics, and CD Changer programs from development to production readiness.

Wong Keung (Former Engineering Supervisor, Hi-Tech Precision Products Ltd.)

Recognized for technical competence, engineering testing, product verification, cross-functional collaboration, and production readiness supporting Sony and Sansui OEM programs.

Christopher Pun (Manager, Hi-Tech Precision Products Ltd.)

Recognized for hardware design, CD Player, CD Changer, and CD-Graphics product development, technical competence, reliability, and professional engineering performance.

Executive Portfolio Overview

This portfolio provides documentary evidence supporting my executive leadership experience in Product Management, Engineering, Manufacturing, Supply Chain, and Commercial Operations across more than 30 years of international experience. It complements my resume by providing employment verifications, professional references, technical supporting documentation, and performance evidence that validate my executive leadership experience, technical expertise, and professional achievements.

Section 1 Portfolio Overview

Document	Purpose
Executive Engineering Portfolio Overview	Provides a visual summary of my engineering, product development, OEM/ODM, manufacturing, supply chain, e-commerce systems, mobile application development, and technical leadership experience across multiple companies, serving as an executive introduction to the supporting portfolio documents.

Section 2 – Employment Verification & Professional References

Company	Referee	Document	Issued
Milo Enterprises Inc.	—	Employment Verification - Expanded Responsibilities (for Business Transformation, Manufacturing Manager → Manufacturing, Supply Chain & Product Development Manager)	16 Mar 2026

Section 3 – Technical Innovation & Intellectual Property

Company	Document	Purpose	Issued
Patent (China)	Utility Model Patent Certificate – Bluetooth Indoor Positioning System	Demonstrates early innovation in Bluetooth-based indoor positioning technology, preceding Apple's public introduction of iBeacon at WWDC 2013.	9 Feb 2013
The Hong Kong Polytechnic University	Micro Fund Programme	Demonstrates innovation, entrepreneurship, product commercialization, and business model development. The 3D e-commerce virtual fitting project was recognized as one of the top-performing teams among approximately 200 participating teams.	2025
Dale (HK) Ltd.	Technical Project Portfolio (Selected OEM/ODM Engineering Examples)	Demonstrates engineering, product development, firmware support, PCB optimization, production readiness, OEM purchase order management, and technical program execution.	Dec 2025
Milo Enterprises Inc.	Edge AI Development Platform	Demonstrates Edge AI product development, system architecture, chipset strategy, technical feasibility, and project leadership.	2026
Milo Enterprises Inc.	Product Architecture Portfolio	Demonstrates IoT system architecture, hardware/software integration, intellectual property strategy, and commercialization planning. Note (1): Detailed technical documentation and design materials are not included in this portfolio due to confidentiality. Executive summaries and selected supporting materials are available upon request where appropriate.	2026

Section 4 – Business Performance Evidence

Company	Document	Source	Purpose
Pine Technology Holdings Ltd.	Public Annual Report Performance Evidence (Inventory Reduction & Working Capital Improvement)	HKEX Annual Reports	Supports inventory optimization achieved during my employment, including a US\$7.2 million (25.9%) reduction in ERP inventory and implementation of R&D cost reduction initiatives. Inventory reached its lowest level across the five-year period before and after my employment, while R&D costs ultimately declined by 85% (from US\$3.0M to US\$0.45M) following the transformation.
Ngai Lik Industrial Holdings Ltd.	Public Annual Report Performance Evidence (Revenue Growth & Profit Margin Improvement)	HKEX Annual Reports	Supports commercial growth achieved during my employment, including 27.3% revenue growth (HK\$631M) and improved gross margin from 6.67% to 8.14% during the company's transition to DVD products. Both represented the company's strongest results across the five-year period before and after my employment.

Section 5 – Commercial Supporting Documents (Optional – Available Upon Request)

Company	Document	Purpose
Circle Bakery (Client Project)	Client Authorization Letter (Google Play Developer Support)	Demonstrates client authorization for me to represent the company in technical and operational matters relating to its Google Play Developer account and a Hong Kong government-funded mobile application project, supporting my role in project management, technical coordination, and client representation.
Dale (HK) Ltd.	iMAP System Patent & Website Commercialization Evidence (2012–2014)	Demonstrates the development and commercialization of the iMAP BLE 4.0 Indoor Mapping, Proximity Marketing and Mobile Payment platform, including system architecture, patent development, website launch, mobile application development, and commercial deployment.
HF Group (Parent Company of METRONIC Europe)	European Distribution & Rebate Agreement	Demonstrates Dale (HK) Ltd.'s commercial supplier relationship with HF Group, one of its European customers and the parent company of METRONIC Europe, supporting distribution through its subsidiaries in the United Kingdom, France, Italy, Spain, and the Netherlands, cumulative purchase volume-based rebate (bonus) agreements, and shorter supply lead times.
Dale (HK) Ltd. / Synergy International Technology Ltd.	Chipset Procurement & Short Lead-Time Delivery Evidence	Demonstrates strategic semiconductor procurement, management of purchase orders exceeding US\$600K driven by wafer MOQ constraints, partial shipment coordination, supplier-side rebate program management, supplier payment support, and short lead-time delivery execution for OEM/ODM manufacturing.

Note (2): These documents are supplementary commercial records retained for verification purposes and are available upon request. They are not required to substantiate my employment history or professional references.

Section 6 – Professional Endorsements & Support Network

Name	Organization	Position	Relationship	Year
Professor Gábor Vajta	Central Queensland University (Australia)	Adjunct Professor	ITSP Innovation Project Support	2016
Professor Hung Yick Hin	The Hong Kong Polytechnic University	Professor of Practice		2016
Dr. Cheng Zhuo	The Hong Kong Polytechnic University	Associate Professor		2016
Dr. Mingyan Xu	HaploX Biotechnology Co., Ltd. (China)	CEO & Founder		2016
Dr. Pattarin Sridulyakul	Pulse Science Co., Ltd. (Thailand)	Vice President & Product Manager		2016
Mr. Lin Kwong Lee	Chinese People's Political Consultative Conference (CPPCC), Foshan City (Chancheng District), China Gold Clever Investment Co., Ltd. Adwin Holding Co., Ltd. (Hong Kong)	Councilor; Chairman; Director		2016
