

Executive Portfolio Appendix

Francis Tai

Technology Strategy • Cross-Functional Leadership • Executive Stakeholder Engagement

Strategic Partnerships • Innovation • Technology Leadership • Global Industry Network

Table of Contents

1. Technology Benchmarking & Innovation

- HKU Precast Wall Project
- ITB Research Collaboration
- Sustainable Materials Research

2. Global Semiconductor & Technology Ecosystem

- NXP / Philips Semiconductors
- Sony
- ESS
- SANYO
- C-Cube
- DVS
- iWedia

3. Strategic Supplier & Technology Partnerships

- Semiconductor Suppliers
- Optical drive Suppliers
- ODM/OEM Partnerships
- Chipset Strategy
- Technology Roadmaps
- Material Forecasting & Booking
- Material Shortage Resolution
- Strategic Sourcing
- Supplier Collaboration

4. Executive & Industry Network

- CEO meetings
- Vice Presidents
- Engineering Directors
- Marketing Directors
- General Managers
- Representative Business Cards
- Executive Visits to Public-Listed Manufacturing Companies

5. Technology Innovation & Commercialization

- Technology Scouting
- Technology Benchmarking
- Commercialization Assessment
- Product Strategy

6. International Executive Engagement

- Indonesia Government
- Three-Star General
- University
- Executive Meetings

7. Global Industry Visits & Manufacturing Benchmarking

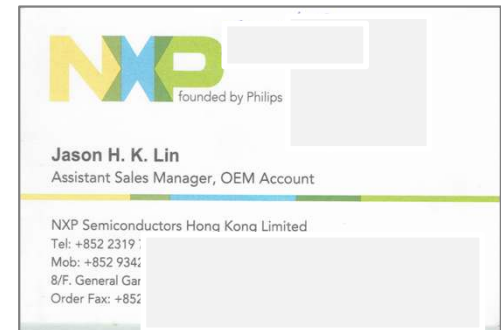

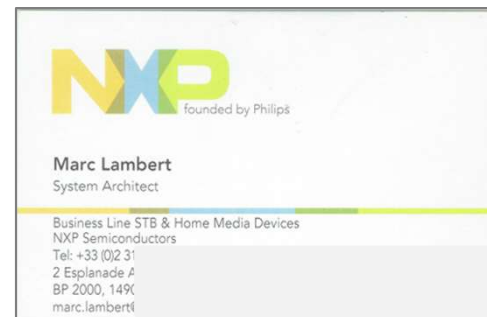

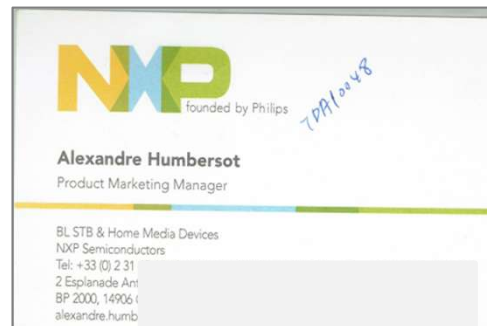

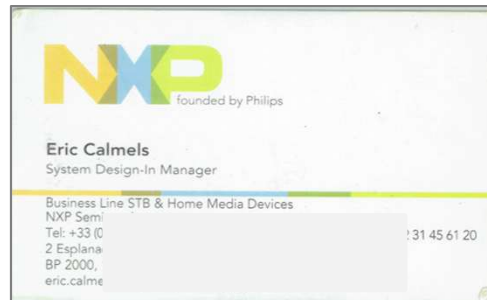

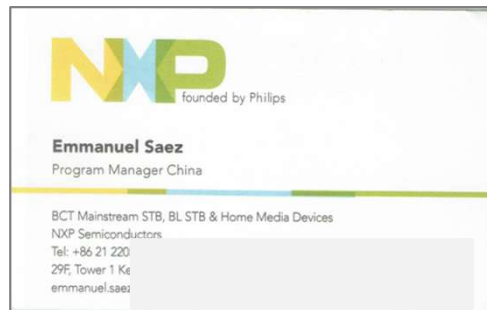

- Semiconductor Company Visits
- Manufacturing Plant Visit
- Paper mill Visit
- Research Laboratory Visits

Over more than 30 years, I built strategic relationships with global semiconductor companies, technology partners, ODM/OEM manufacturers, and component suppliers. These executive and technical collaborations enabled chipset strategy, technology roadmap planning, supplier development, product innovation, manufacturing readiness, and global OEM commercialization across multiple high-volume consumer electronics programs.

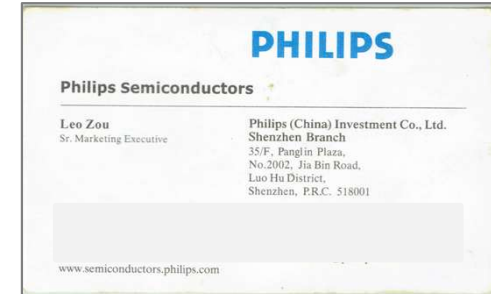

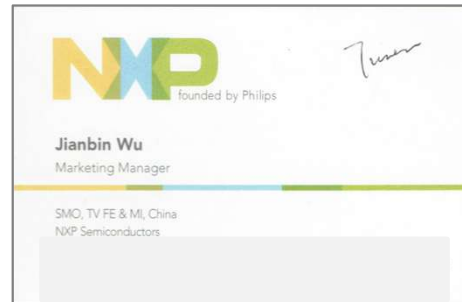

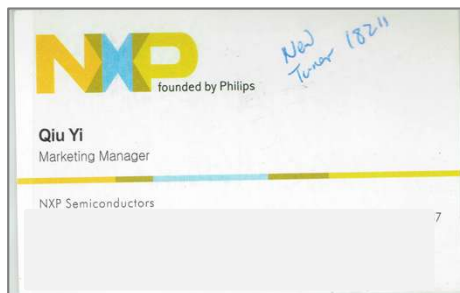

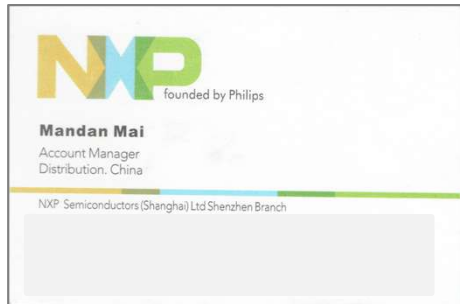

Philips Semiconductors / NXP

Built long-term relationships with **Philips Semiconductors (later NXP)**, collaborating on chipset selection, RF tuners, multimedia SoCs, technical support, application engineering, product roadmaps, and commercialization for global consumer electronics products. **(Dale OEM/ODM DVB-T product development)**

Philips Semiconductors / NXP

Built long-term relationships with **Philips Semiconductors (later NXP)**, collaborating on chipset selection, RF tuners, multimedia SoCs, technical support, application engineering, product roadmaps, and commercialization for global consumer electronics products. **(Dale OEM/ODM DVB-T product development)**

Sony

Served as the key liaison between the in-house Japanese Chief Engineer (contracted direct supervisor), Sony's Japanese engineering team, company management, and customer Business Units (BUs), leading cross-functional collaboration on optical drive technologies, chipset integration, product development, UI/UX localization, multi-region product readiness, solution readiness, pilot run readiness, production readiness, regional product launches, executive project reporting, technical support, supplier coordination, and manufacturing readiness for Hi-Tech Precision's first strategic Sony & Sansui OEM CD/CDG program, with planned production exceeding 300,000 units.

Sony

Served as the key liaison between Management, Business, Supply Chain, Engineering, and Sony's engineering and semiconductor teams, leading cross-functional collaboration on chipset strategy, optical drive technologies, product sample and DVD mechanism evaluation, BOM cost optimization, solution and production readiness, material planning, demand forecasting, supplier coordination, and technical support across multiple DVD platform developments—including C-Cube, ESS, and subsequent chipset platforms—to accelerate OEM DVD player commercialization, strengthen market competitiveness, and ensure manufacturing readiness at Ngai Lik.

Semiconductor Ecosystem • Global Technology Partnerships • Supplier Development • Product Commercialization

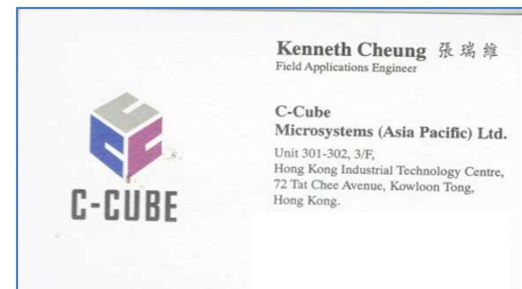

SANYO

As OEM Program Leader, I transformed chipset strategy into business growth through disciplined project leadership by integrating technology roadmap planning, product development, engineering, supply chain, and aligned cross-functional execution. I established executive and engineering relationships with SANYO's semiconductor and product engineering teams, leading chipset strategy, chipset evaluation, custom firmware development, demand and supply planning, material planning, solution readiness, production and manufacturing readiness, and rapid OEM commercialization for the company's first blue-chip OEM programs for SANYO and DAEWOO.

C-Cube

Served as the key liaison between Management, Business, Supply Chain, Engineering, and C-Cube's engineering and semiconductor teams, leading cross-functional collaboration on chipset strategy, MPEG decoder technology, product sample evaluation, BOM cost optimization, solution readiness, production readiness, product positioning, material planning, demand forecasting, technical support, and supplier coordination to successfully develop and commercialize Ngai Lik's first C-Cube-based OEM DVD player platform, establishing the company's DVD technology foundation for subsequent ESS and next-generation chipset platforms.

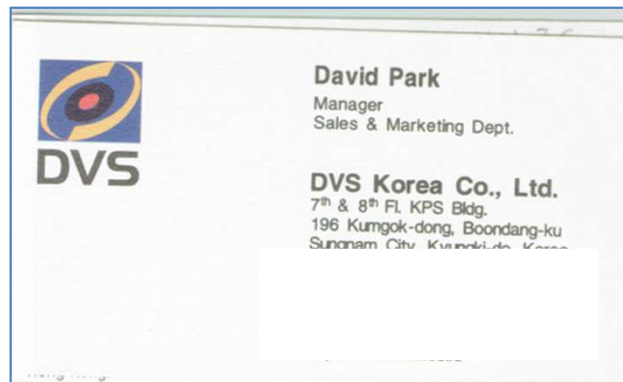

ESS Technology

Served as the key liaison between Management, Business, Supply Chain, Engineering, and ESS Technology's engineering and semiconductor teams, leading chipset strategy, BOM cost optimization, solution and production readiness, custom firmware development, material planning, demand forecasting, technical support, and supplier coordination for Ngai Lik's second-generation ESS DVD platform. The cost-competitive ESS platform accelerated OEM DVD player commercialization, strengthened market competitiveness, increased customer demand, and supported the company's high-volume OEM programs.

DVS Korea

Served as the key liaison between Management, Business, Supply Chain, Engineering, and DVS, a key strategic DVD mechanism supplier, driving strategic supplier partnerships, DVD mechanism integration, driver and firmware integration, solution and production readiness, material planning, demand forecasting, material allocation, lead-time optimization, technical support, and cross-functional execution to accelerate OEM DVD player commercialization and support Ngai Lik's high-volume OEM programs.

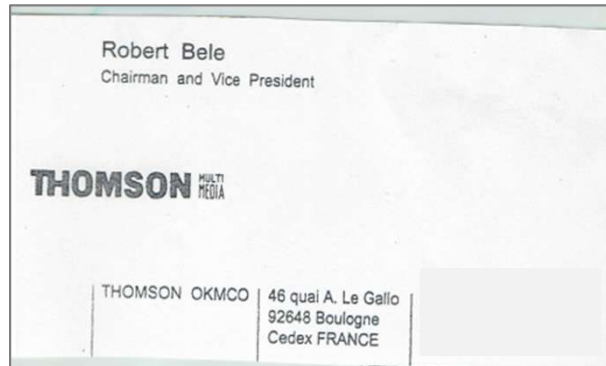

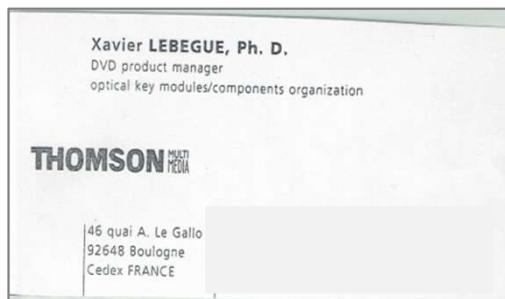

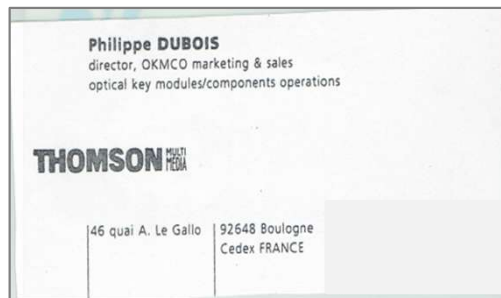

iWedia

Collaborated with iWedia on DVB middleware, digital television software integration, and commercialization for global consumer electronics products.

Semiconductor Ecosystem • Global Technology Partnerships • Supplier Development • Product Commercialization

Executive Meetings with Global Technology for DVD Platform Development

Collaborated continuously with engineering and business teams at Thomson Multimedia and Sharp to evaluate emerging semiconductor chipsets, optical mechanisms, firmware compatibility, design readiness, cost competitiveness, and commercialization strategies. As a key business leader, I benchmarked technology platforms, supplier roadmaps, and competitive solutions to identify strategic technology advantages, accelerate OEM product commercialization, strengthen market competitiveness, and support sustainable business growth.

By integrating business leadership with chipset strategy, technology roadmap planning, product development, engineering, and project management expertise, I translated technology strategy into rapid execution and OEM commercialization, contributing to Ngai Lik achieving its highest sales growth in five years during my tenure.

Executive Engagement with Public-Listed Strategic Suppliers During Critical Supply Shortage

(HK Stock Code: 00751)

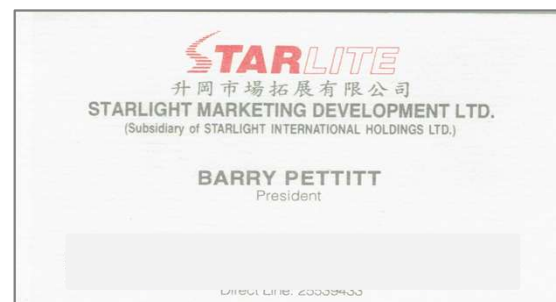

I developed a competitive DVD platform strategy by adopting the ESS chipset as a cost-effective alternative to the more expensive C-Cube platform, strengthening Ngai Lik/Denca's OEM competitiveness and supporting cumulative shipments exceeding 300,000 DVD players. The rapid commercialization and strong market acceptance of our ESS-based platform significantly increased customer demand, resulting in a critical DVD mechanism shortage. During executive meetings with Skyworth and Starlite, I gained valuable insights into alternative manufacturing approaches, supplier capabilities, and cost structures while identifying Skyworth's excess DVD mechanism inventory. I led executive engagement and commercial negotiations to secure approximately 50,000 DVD mechanisms from Skyworth, maintaining production continuity, preventing short shipments, and ensuring on-time customer deliveries.

When Skyworth's sales team asked what differentiated our DVD platform in the market, I explained that our competitive advantage came from integrating business leadership with chipset strategy, technology roadmap planning, product development, engineering, and project management.

By translating technology strategy into rapid execution and OEM commercialization, while leading cross-functional collaboration across business, engineering, supply chain, project execution, and manufacturing, we accelerated chipset platform decisions, aligned execution, shortened product development cycles, and strengthened market competitiveness. The same executive leadership approach was later applied at Pine Technology and documented in my [Executive Business Transformation Memorandum to the Top Management Board \(2002\)](#), demonstrating a repeatable capability in business transformation and strategic execution. This integrated leadership approach contributed to Ngai Lik achieving its highest sales growth in five years during my tenure.

(HK Stock Code: 00403)

Executive Supplier Engagement • Strategic Sourcing • Supply Chain Risk Mitigation • Alternative Source Development • Business Continuity • OEM Manufacturing

李開源
Vincent Lee Sales Director

SigmaTel台灣分公司 台北市內湖路一段88號4樓

At Pine Technology, I led the strategic evaluation and selection of MP3 decoder chipsets and DSP technologies in collaboration with SigmaTel and its technology partner, Cytech Technology. I benchmarked semiconductor platforms from Texas Instruments, Cirrus Logic, and SigmaTel, assessing total cost of ownership, technical maturity, firmware capability, product roadmap, supplier support, and time-to-market. Based on this evaluation, I selected SigmaTel as the strategic chipset platform, strengthening the company's OEM product portfolio through BOM cost optimization, faster commercialization, and enhanced market competitiveness.

Technology Benchmarking & Innovation Research – HKU Precast Wall Project

Conducted technology benchmarking and innovation research on the HKU Precast Wall Project, evaluating patented construction technology, manufacturing methods, commercialization potential, and technical challenges. The insights gained subsequently supported cross-university collaboration on an alternative precast wall development initiative in Indonesia.

香港大學
THE UNIVERSITY OF HONG KONG

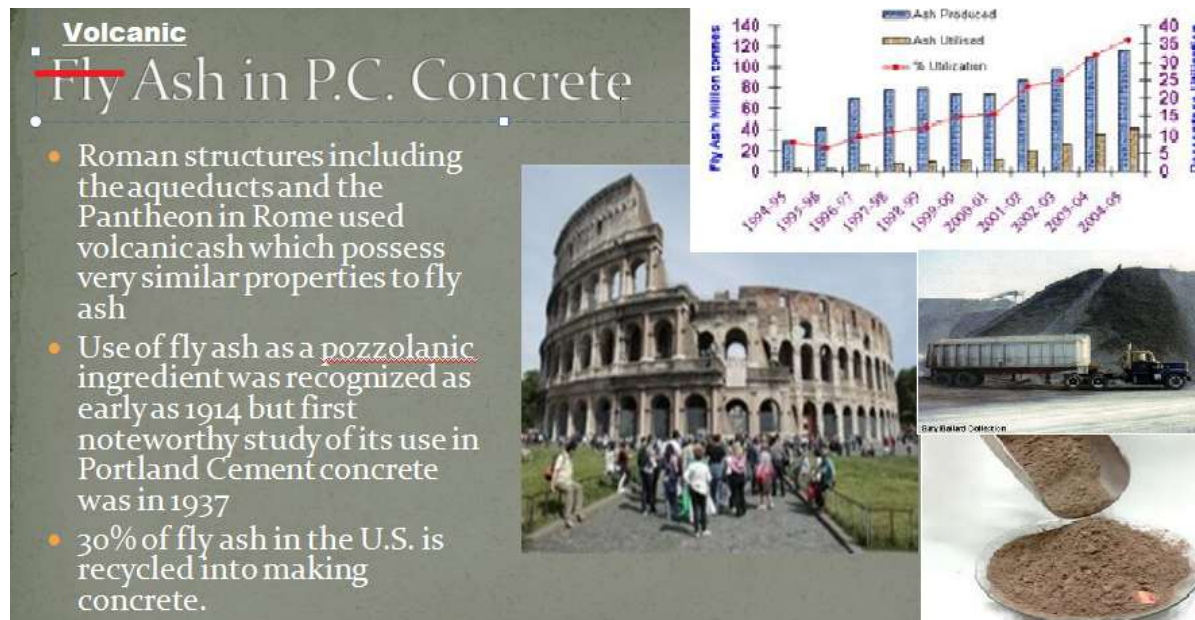

Technology Benchmarking • Innovation Research • Cross-Industry Collaboration

Project Leadership – Cross-University Research Collaboration with Institut Teknologi Bandung (ITB), Indonesia

As Project Leader, I led a cross-university research collaboration with Institut Teknologi Bandung (ITB), Indonesia, to develop an alternative precast wall system. Building on insights gained from technology benchmarking of the HKU Precast Wall Project, I directed technology evaluation, fly ash material research, commercialization assessment, and cross-functional collaboration to advance sustainable construction innovation.

Research Focus • Fly Ash Material Evaluation • Sustainable Concrete Technology • Alternative Precast Wall System • Commercialization Assessment

International Executive Relationships & Stakeholder Engagement – Indonesia

Developed executive-level relationships with senior government officials, business leaders, and strategic partners across Southeast Asia, strengthening stakeholder engagement, cross-border collaboration, regional business development, and international cooperation.
